

Prepare yourself for a
worry-free future

Backup Infrastructure Assessment & Audit

Overview

APARA's Backup Infrastructure Assessment & Audit is a comprehensive independent review of an organization's backup Policies & Procedures, related Infrastructure and backup processes. It provides an assessment of organizational risk and develops recommendations for new backup processes and mechanisms. It reports on best practices in the industry and helps an organization improve backup performance, reliability and manageability.

An external Backup Audit gives stakeholders a true assessment of risk and exposure, and helps optimize customer backup infrastructure.

Business Drivers

- Not all of today's organizations are matching the growth in their data volumes with corresponding increases in their backup and recovery capabilities.
- Many enterprise backup systems today still amount to nothing more than a patchwork of standalone drives attached to individual servers with no centralized control. That lack of control can lead to lost data that can't be restored, which can have a serious impact on the enterprise as a whole.

How Apara adds value

APARA possesses vast expertise in technology solutions and possess second-to-none intellectual capital and technology know-how acquired through a decade of Systems Integration experience, domain expertise with skilled and certified resources.

- We follow a strategic delivery approach and willingness to hold ourselves accountable
- Practice systematic and structured approach to services in each of the phases
- Strong Project Management handling skills
- Enjoy unique partnership with Storage Ecosystem companies
