

Because Security Threats are
'Real' in the 'Virtual' World

ISO 27001 Preparedness & Certification

Overview

The current version of the standard, the ISO/IEC 27001:2005 (ISO 27001) or 27k, as it is commonly referred to, is a management system that identifies, manages and minimizes a range of threats to business information.

Compliance with this Standard highlights an organization's efforts in protecting sensitive information and is intended to make information systems more dependent in their ability to maintain data confidentiality and integrity.

Business Drivers

- Corporate Governance
- Increased Risk Awareness
- Customer Expectation
- Market Expectation
- Regulatory & ISMS Compliance

How Apara adds value

APARA possesses vast expertise in technology solutions and intellectual capital acquired through two decades of Systems Integration experience, domain expertise with skilled and certified resources.
