# Network Security, Architecture & Design Review

## Overview

The Network Security Architecture Service offering comprehensively reviews the Network Security Architecture and Design of the applications, network, servers and services within an organization's environment. It identifies methods to enhance and improve the company's information system by measuring how well it conforms to a set of established criteria and set of best practices.

This service goes often hand in hand with Technical Security Assessment [Vulnerability Assessment and Penetration Testing (VAPT)], Information Security Policy Development and Host hardening Services.

---

## Business Drivers

- Security Architecture design flaws for many organizations.
- Evolving threats pose danger to the organizational security.
- Loss of network or system capabilities, as a result of network growth
- Data volumes and velocity of change are increasing at an exponential rate
- Inability of managing the security landscape
- Inability of end users to adhere to the established practices on Security.
- Compromise of customers and partners privacy and sensitive data
- Compromise of employee privacy
- Loss of customers
- Legal liability and penalties

---

## How Apara adds value

APARA possesses vast expertise in technology solutions and possess second-to-none intellectual capital and technology know-how acquired through a decade of system integration experience, domain expertise with skilled and certified resources.
