

Building a responsive IT infrastructure

APARA ' s Network Design Assessment Services strives to understand your business needs and provides a detailed analysis of future bottlenecks, possible pain areas and enables you architect a responsive network infrastructure.

Looking through the glass

The demand for organizations to continuously analyze their Network Infrastructure and ensure that the infrastructure is synchronized with their business needs is growing by the day. Organizations need a clear roadmap in terms of future investments in the networking infrastructure. They need to know:

- ▶ If investment is necessary
- ▶ What kind of infrastructure is required for their business needs?
- ▶ If the existing infrastructure can be modified to sustain their business needs with minimal investments
- ▶ And what kind of network design would be optimal for their business requirements?

Providing a clear picture

Apara strives to help customers arrive at these decisions through an exhaustive range of Network Infrastructure Design

Services. Services that validate existing environment capabilities and makes strong recommendations for improvement.

The man-machine value adds

Apara possesses vast expertise across technology and industry domains. This combined with the experience of having deployed multiple solutions enables Apara to offer effective consultancy services to diverse enterprises across domains.

- ▶ Intellectual capital and technological know-how, through a decade of solution integration experience
- ▶ Strategic delivery approach and willingness to hold ourselves accountable
- ▶ Systematic and structured approach to services in each of the phases
- ▶ Experience in maintaining as well as setting up enterprise wide network infrastructure

We architect next generation IP-based network solutions that are dynamic agile infrastructures making it feasible for businesses to conduct critically confidential business activity that offers new methods of creating, managing and using the enterprise networks.

Delivering when it matters

- ▶ Apara string of service deliverables is born out of the need to make businesses work better. A need that stems from quality assessment and understanding of the business requirements of the customer.
- ▶ We identify the gaps between a business's needs and network requirements and Pinpoint bottlenecks in the network design of the organization
- ▶ Suggest an architecture design to meet business needs
- ▶ Define a technology road map for the design strategy, which helps the company meet its business objectives
- ▶ Identify and isolate individual needs of specific scenarios requiring "high speed access", "highly redundant access" and "differentiated services" based network access mechanisms
- ▶ Identify the "Quality of Service" deliverables from each sub-component of the networking infrastructure and map the same to technical and hardware requirements
- ▶ Offer in-depth TCO and ROI analysis for the proposed solution

Cutting edge advantages

The advantages of Apara's design and assessment service deliverables are immense.

- ▶ Helps organizations develop an effective network design strategy
- ▶ Leverage the existing infrastructure thereby protecting investment
- ▶ Help customers arrive at a clear roadmap in terms of future investments
