# Storage Infrastructure Assessment & Usage Audit

## Overview

Apara Storage Infrastructure Assessment and Usage Audit Services provide a comprehensive, enterprise-wise assessment and review of your existing storage Infrastructure and operations. We offer services to help you analyze your current infrastructure, identify your IT requirements & storage related requirements, refine your short and longterm business goals, weigh the costs and benefits of prospective storage solutions, help you justify your investment decisions, and ensure the maximum output from the storage environment you choose to put in place.

## Business Drivers

- Informed cost/benefit decision-making on your storage investments
- Greater performance and capacity utilization but also introduces new complexity to the environment
- Data must be protected in an efficient, cost-effective, and measurable way, without affecting business continuity
- Data must be managed within both production and archives to meet business, regulatory, and compliance requirements
- It should be assumed that data will continue to be generated and stored at record levels within the organization and that regulatory retention requirements will become even more stringent over time

## How Apara adds value

APARA possesses vast expertise in technology and solutions and possess second-to-none intellectual capital and technology know-how acquired through a decade of system integration experience, domain expertise with skilled and certified resources.

- We follow a strategic delivery approach and willingness to hold ourselves accountable
- Practice systematic and structured approach to services in each of the phases
- Enjoy unique partnership with Storage Ecosystem companies

### Deliverables

As a part of our valued deliverables, we provide recommendations to optimize storage management effectiveness impacting day-to-day business operations through

- Customized documentation that includes storage configuration, server-to-storage usage analysis, application-to-storage analysis and identification of storage bottlenecks
- Define a storage technology road map for the organization and helping meet its business objectives
- Produce a report card on the efficiency and effectiveness of storage environment
- Produce TCO and ROI analysis of the proposed storage architecture

### Business Benefits

- Platform neutral assessment that meet business objectives
- Site assessment and analysis that provides valuable insights in to the present infrastructure directly helping organizations in formulating IT storage strategy
- Benefit of TCO and ROI analysis that helps customers make better storage acquisition decisions storage architecture
