

Perimeter Security Solutions

Industry segment – Telecom

The customer is one of the leading Mobile Service Provider in India

Customer challenges

- **64 bit applications performance is slow**
- **Huge number of mobile subscribers are accessing application from out side**
- **Distributors / Channel partners spread across the country**
- **12 Circle operating across the country, accessing central data center**

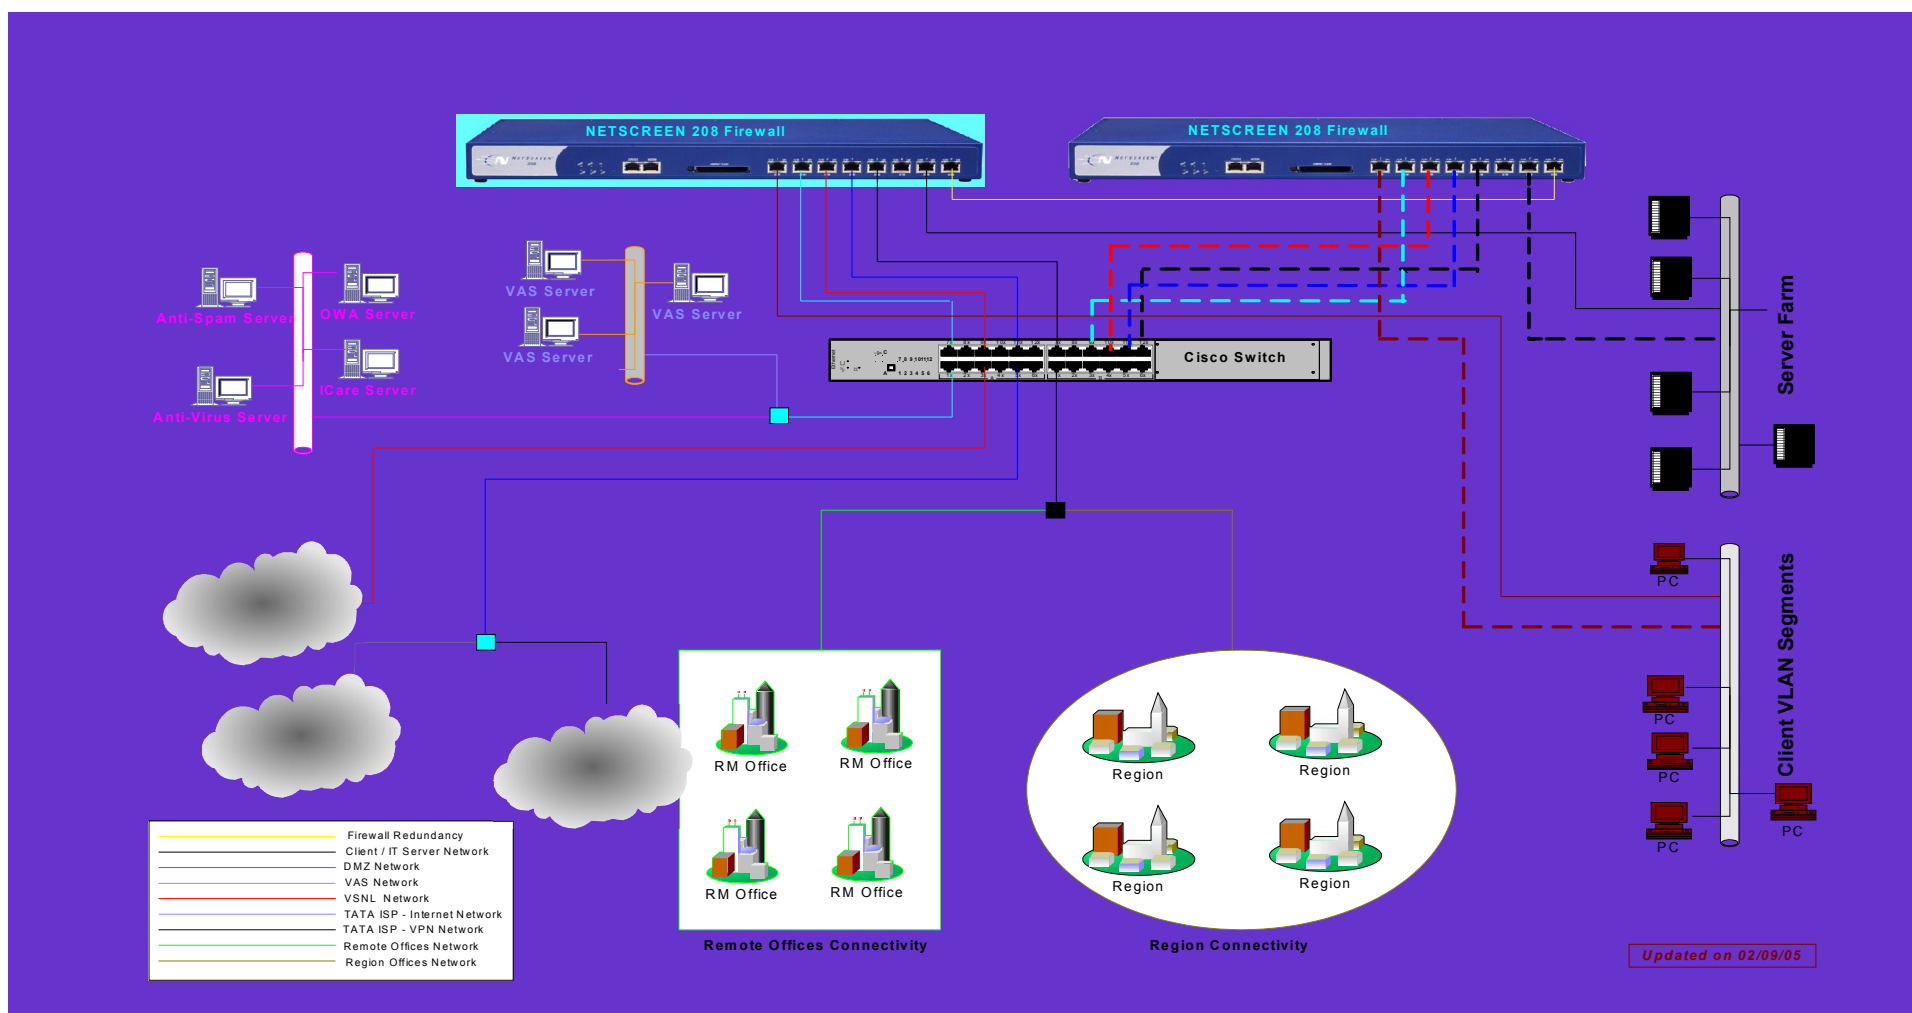

Solution Highlights

- High performance GW Firewalls in HA mode
- Integrated IDP with central Management
- DoS/DDoS Protection.
- IPSEC – Hub and Spoke VPN network connectivity between the circles
- Client less SSL VPN Connection
- SSL VPN failover cluster on WAN
- Scalability.
- Seamless integration with existing infrastructure

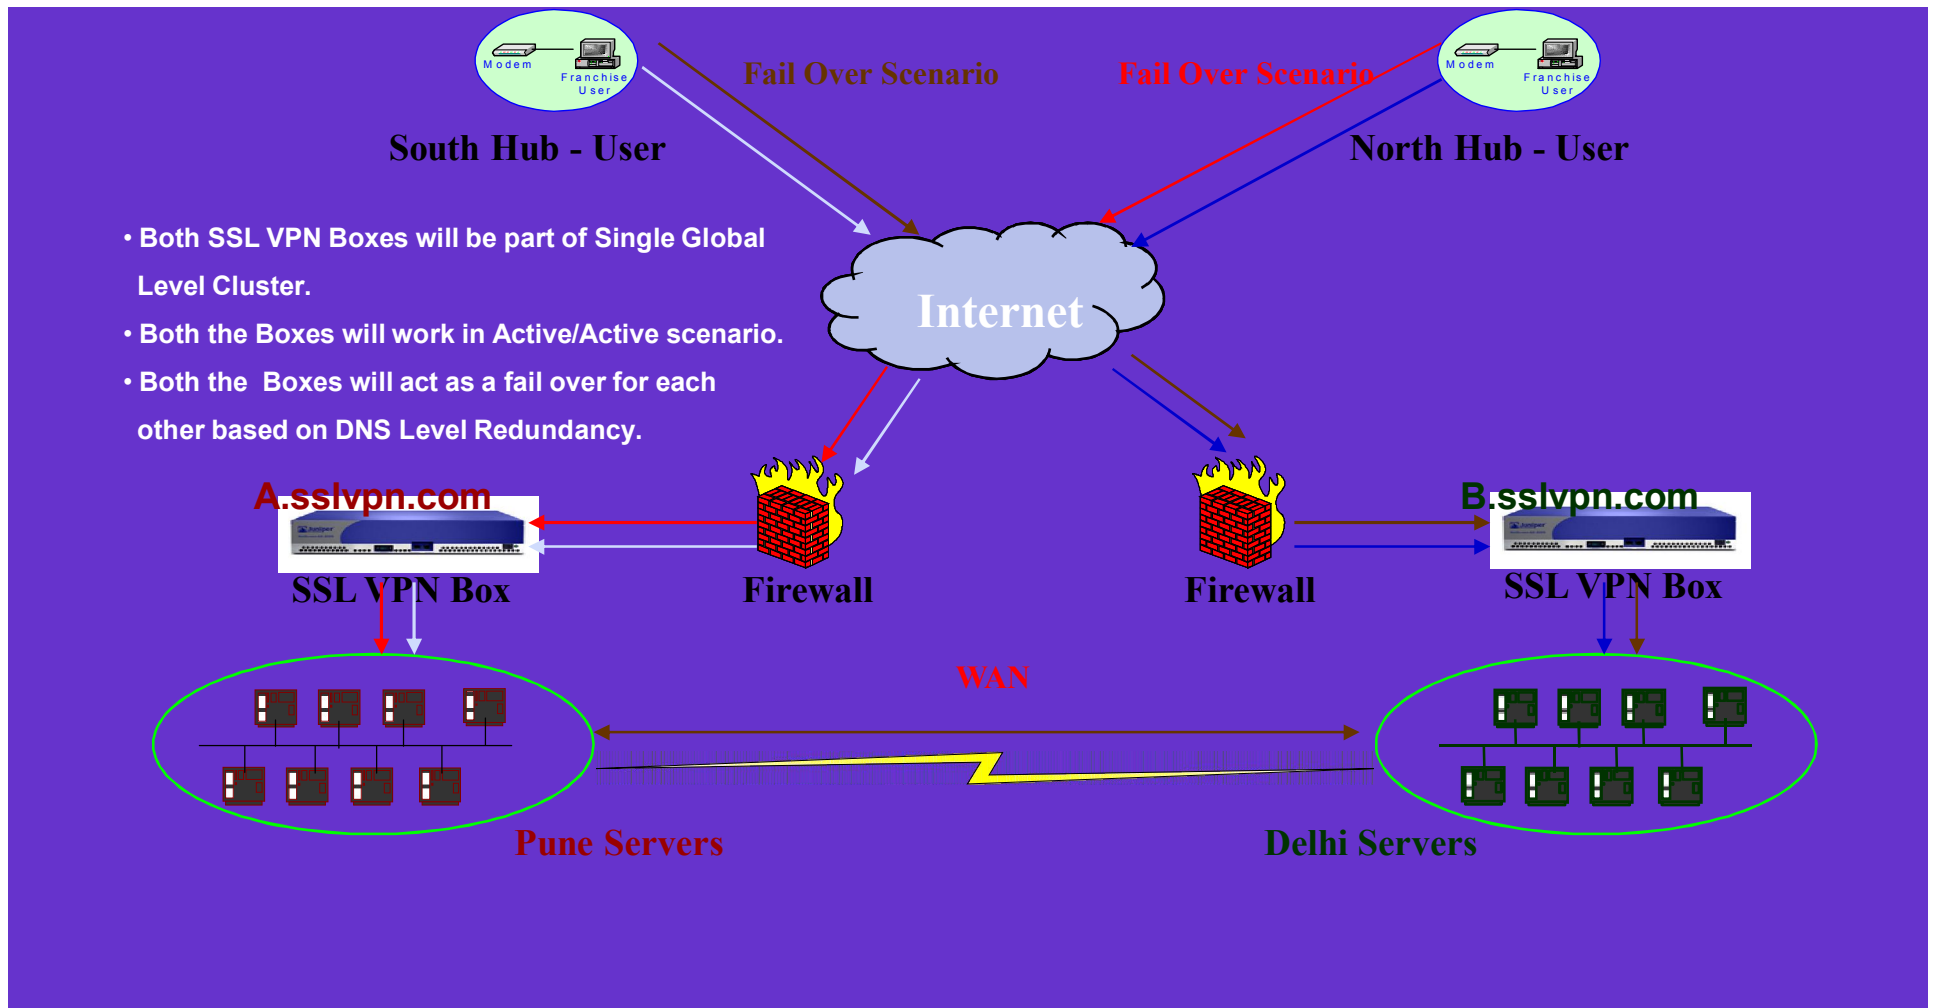

Architecture Blue Print

Architecture Blue Print

- Both SSL VPN Boxes will be part of Single Global Level Cluster.
- Both the Boxes will work in Active/Active scenario.
- Both the Boxes will act as a fail over for each other based on DNS Level Redundancy.

Solution Benefits

- Faster Application response
- Better manageability due to integrated IDP Module
- Client less SSL VPN connectivity
- Role based access to partners and distributors
- Hub and Spoke VPN Connectivity reduced number point to point Links
