

Core Optimization Solutions

Industry segment – Leading Software House

The customer is one of the leading Software development house.

Customer challenges

- Secured Application performance issue due to slow SSL transactions.
- Application rollout over WAN leads slow performance due to several inadequate bandwidth infrastructure.
- High Server utilization due queuing of several slow link clients.
- Inappropriate load distribution among the Servers.

Solution Highlights

- Resource optimization- TCP offload.
- SSL offload – Capacity increase in SSL transaction.
- DoS/DDoS Protection.
- TCP connection load balancing for even load distribution.
- Scalability.
- Seamless integration with existing infrastructure

Solution Benefits

- Faster Application response by 60%
- Better manageability due to application visibility due load distribution.
- Capacity increase by optimization of server resource.
- Capacity increase in SSL transaction due to SSL offload on additional appliance.
- Reduce in Number SSL certificate- cost savings.
